

Flat bar undercutter

For lifting leeks, radishes, parsnips, nursery tree seedlings etc., an adjustable vibrating bar reduces draft and increases soil agitation. The bar oscillates from the centre. The Flat bar undercutter is a simple robust machine that works well under poor conditions, including wet ground and very dry, hard ground. It leaves the crop standing in the ground in much the same position as before undercutting as is required for leeks, spring onions, etc..

The machine comes as a simple flat bar or with digger teeth added for extra agitation.

SPECIFICATIONS:

- 60" or 70" standard working width
- Different working widths are available to order
- 25 HP minimum requirement
- 3-point linkage, category 1 & 2 as standard
- P.T.O or Hydraulic drive

OPTIONAL EXTRAS:

- Optional digger teeth on flat bar
- Depth wheels & cutting discs
