

## Plastic Hole Punch

The Plastic Hole cutting machine is designed to save time on marking out and cutting out plastic sheeting. It is more precise than hand cutting in ensuring spaces are even, and gives a clean cut without leaving loose flaps which are vulnerable to being caught by the wind. The angled wheels run along the sides of the raised bed to keep the machine level and square and to prevent misses, whilst the cutting unit 'floats' to follow the contours of the bed. Its main use is on plastic sheet used to cover fumigated land.

*Simple, but affective!*

### SPECIFICATIONS:

- Fully adjustable in width and height
- Variable hole spacing
- 3-point linkage mounting, cat. I and II
