

Raised Bed Former

The Raised Bed Maker has cultivator tines which are similar to rotor spikes and are fitted on two spirals which meet in the middle of the machine. This configuration can cultivate soil so that large clods are left at the bottom of the bed and small, loose tilth remains at the top. There is a roller at the back to firm the bed up prior to planting which has an adjustment for making 'over winter' beds (i.e., not so firm).

SPECIFICATIONS FOR BOTH MACHINES:

- Adjustable bed height 0.10m to 0.40m
- Duplex chain drive
- 3-point linkage categories I & II
- PTO speed: 540 r.p.m

SPECIFICATIONS FOR STANDARD MACHINE:

- Power requirements from: 40 h.p.
- Adjustable bed width: 0.70m to 1.20m

SPECIFICATIONS FOR LARGE MACHINE

- Power requirement from: 50 h.p.
- Adjustable bed width: 0.70m to 1.50m

The Raised Bed Maker is available in two widths:

Standard at 1.2m

Large at 1.5m
