

## Trayfiller

The Trayfiller is a versatile filling machine, and is designed to fill a wide range of trays, and is equally at home with small plug cells or pot shuttle trays. Variable speed on the compost elevator and tray conveyor flow with minimum compost re-circulation. A double paddle compost distribution system, variable speed vibrator and spiral finishing brush ensure an even fill.

Quick to adjust hardware and incremented electrical speed control minimize tray size change over times.

*Strength with simplicity and reliability, are the key notes of the design and at an affordable price!*

### SPECIFICATIONS

- Single phase D.C drive
- 400mm wide variable speed conveyer
- Tray guides with parallel adjustment
- 18" double wheels for ease of movement
- Double paddle spreading system for even compaction
- 2 hopper sizes available
- Sliding trap door for easy cleaning access
- 8" rubber castors with brake

Optional: 3m of roller conveyer and stand.
